Introduction

The purpose of the Crash Summary is to provide statistical information about the crashes reported to the County for the calendar year 2022. Sarasota County staff used a web-based application called Crash Data Management System (CDMS), created and maintained by Benesch, and Signal Four Analytics, created and maintained by University of Florida, to aid in the development and analysis of this report. With the use of these systems, crash data can be efficiently used to aid in crash analysis/reporting, in internal and external customer support, in performing road safety audit, provide traffic study support, and safety project identification.

Effective safety improvements rely on a careful analysis of traffic crash data. Each crash data point is categorized by its crash type, time of day, day of week, month of the year, severity of the crash, rankings based on crash rates, impact type of crash, and location of crash to analyze a data set for each category.

Various methods are available to identify intersections and roadway segments that have experienced a higher-than-expected frequency or rate of crash occurrence. If traffic volumes are available, the best method to identify the most dangerous crash locations is to rank them based on the crash rate. The crash rate is a metric used to evaluate crashes at various locations. Crash rates are normally considered better indicators of risk than crash frequencies alone since they account for differences in traffic volumes. The crash rate is useful because it considers not only the total number of crashes occurring at a specific location, but also the number of vehicles entering an intersection as well as the length of a segment. The crash rates per Million Entering Vehicles (MEV) for intersections and per Million Vehicle Miles (MVM) for segments are computed according to the formula in the Traffic Engineering Handbook published by the Institute of Transportation Engineers as follows:

Crash Rate at an Intersection (MEV):

$$CrashRate = \frac{numberofcrashes * 1{,}000{,}000}{numberofyears * 365 * AADT}$$

Crash Rate on a Segment (MVM):

$$CrashRate = \frac{numberofcrashes * 1{,}000{,}000}{numberofyears * 365 * AADT * segment\ length}$$

Whereas,

number of crashes:	Number of crashes per year
number of years:	Set as 1, since analysis is performed on an annual basis.
AADT:	Annual Average Daily Traffic (Volume of Traffic) on the segment or entering the intersection.
segment length:	Length of segment in miles

Note: The 2022 crash summary does not include crashes that occurred on I-75 and in parking lots. The crash statistics include both short form and long form crash reports from incorporated Sarasota County except where otherwise noted.

Definitions

Bicycle

Every vehicle propelled solely by human power, and every motorized bicycle propelled by a combination of human power and an electric helper motor capable of propelling the vehicle at a speed of not more than 20 miles per hour on level ground upon which any person may ride, having two tandem wheels, and including any device generally recognized as a bicycle though equipped with two front or two rear wheels. The term does not include such a vehicle with a seat height of no more than 25 inches from the ground when the seat is adjusted to its highest position or a scooter or similar device. A person under the age of 16 may not operate or ride upon a motorized bicycle.

Bicyclist

Any rider of a bicycle. A bicyclist is considered a non-motorist.

Cargo Van

A cargo van is any van where the area behind the driver or cab is designed for transporting cargo or operated for general commercial use.

Driver

Unless otherwise indicated, the operator of a motor vehicle. Driver data typically excludes uninjured persons presumed to have been operating hit-and-run or properly parked vehicles.

Fatal traffic crash

A traffic crash that results in one or more fatalities within thirty days of occurrence.

Injury

Hurt, damage, or loss sustained by a person as a result of a traffic crash. Definitions for the various injury levels are as follows:

- Injury crash - A non-fatal traffic crash that results in one or more injuries.
- Incapacitating injury - Any visible signs of injury from a crash and person(s) had to be carried from the scene.
- Non-incapacitating injury - Any visible injury such as bruises, abrasions, limping, etc.
- Possible injury - No visible signs of injury but complaint of pain or momentary unconsciousness.

Moped

A motor-powered cycle with a pedal-activated motor and maximum of two brake horsepower.

Motorcycle

A motor vehicle, with a seat or saddle for the driver's use, traveling with no more than three wheels in contact with the ground, excluding a tractor or a moped.

Non-Motorist

Any person other than an occupant of a motor vehicle in transport. This includes pedestrians, bicyclists, other cyclists, occupants of other motor vehicles not in transport and occupants of transport vehicles other than motor vehicles.

Non-Junction

Any location of a crash that occurs on the roadway and is not related to an intersection.

Passenger Car

Motor vehicles used primarily for carrying passengers.

Pedestrian

An individual involved in a crash who was not occupying a Motor Vehicle, Bicycle or other mobile conveyance. A pedestrian is considered a non-motorist.

Property Damage Only

Loss of all or part of an individual's vehicle and/or property damage only resulting from a traffic crash not involving injury or fatality to a person.

Sport Utility Vehicle (SUV)

A motor vehicle other than a motorcycle or bus consisting primarily of a transport device designed for carrying ten or fewer persons, and generally considered a multi-purpose vehicle that is designed to have off-road capabilities. These vehicles are generally four-wheel-drive (4x4) and have increased ground clearance. A utility vehicle has a gross vehicle weight rating (GVWR) of 10,000 pounds or less.

Traffic crash

A crash involving at least one motor vehicle on a roadway that is open to the public.

Traffic fatality

The death of a person as a direct result of a traffic crash within thirty days of the crash occurrence.

SARASOTA COUNTY TRAFFIC SAFETY REPORT

This report is generated by using Signal Four Analytics* based on data available through March 28, 2024. Florida law enforcement agencies submit crash reports to Florida Highway Safety and Motor Vehicles (FLHSMV) typically within 10 days of the crash date. FLHSMV sends the crash data to S4 Analytics 60 days after the submission date to comply with the provisions of SB 1614. Therefore, crash data in S4 Analytics is typically available **70** days after the crash date.
